Polypeptides comprising an immunogenic portion of an ovarian carcinoma protein or its variants, useful for stimulating an immune response in a patient and treating ovarian cancer -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This invention relates to polypeptides comprising an immunogenic portion of an ovarian carcinoma protein which acts as an immunostimulant and is cytostatic. The polypeptides, polymucleotides, antibodies, fusion proteins, T cell populations and antigen presenting cells that express the polypeptides are useful for stimulating an immune response in a patient and treating ovarian cancer. This sequence represents DNA related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      181 CAGGGGGCTCTGTGAGGTCCCCAGGAATCCTTGTCGCATGAGCTGCCAGAACCATGGAC 240

```
derived from KIDNTUTO CONA library. It encodes human protease and associated protein 9 (PPRG-9), which is expressed in urologic and musculoskeletal tissues. Anti-PPRG antibodies can be used as therapeutic antagonists, reagents for diagnosis and monitoring diseases and for isolating PPRG. PPRG nucleotide sequence can be used as probe or primer for diagnosis and monitoring of PPRG-related diseases and gene mapping. PPRG can be used in the treatment of call proliferative disorders like cancer, arteriosclerosis, atherosclerosis, bursitis, cirrhosis and hepatitis, and immune disorders like AIDS, Addison's disease, adult respiratory distress syndrome, allergies, ankylosing spondylitis and amyloidosis.
            New human proteases, useful for diagnosis, treatment and prevention of cell proliferative disorders such as atherosclerosis -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   240

                                                                                                                                                                                                                                                                                                                                               Pb
                                                                                                               δŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical classocial conjugation or biological activity. The polypeptide and polynuclectide sequences have applications in capponable for general disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and diagnostic coding sequences of data and products dependent on DNA and diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from NIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The compinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and
                                                                                                                                                                                                                                                                                                                                                                                                                                              1009 ATTITCCCTTCCACACCTGTGACCTGAGGATCGACGGAGACTGCTTCATGTGTGTTCAG 1068

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The polyucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or guantitating a polypeptide in tissue, as molecular weight markers and as for supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in clasponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and and can diagnostic coding sequences of the invention.

Conditional coding sequences of the invention.

Conditional coding sequences of the invention of mutations of specification, but was obtained in electronic format directly from WIPO are the coding sequences.

proteins from a variety of organisms, including human, dog, cat, horse, cow, pig, hamster, monkey, macaque, yeast, bacteria, fruit fly, sea urchin and tomato. These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA of the invention.
The present invention provides the protein and coding sequences of novel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     360

```

```
The invention relates to primers for synthesising full length cDNA clones. 830 cDNA molecules encoding a human protein have been isolated and nucleotide sequences of 5'- and 3'-ends of the cDNA molecules have been determined. Primers for synthesising the full length molecules have been determined. Primers for synthesising the full length the CDNA are useful for clarifying the function of the protein encoded by the CDNA are useful for clarifying the function of the protein encoded by length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is the nucleotide sequence of the 5'-end of a cDNA provided in the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EDPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                      ó

                                                                                                                                                                          molecules have been determined. Primers for synthesising the full length CDNA are useful for clarifying the function of the protein encoded by the CDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence was used as the representative sequence from a human clone which was used in homology searches to identify the clone.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, colymerase chair reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags of or identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polypurclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations in the constant of a sesses blodiversity and and and constant of the traits to assess budgiversity and and and application of mutations of the constant of the constan
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                677 AGGCAACTGGGAGGTCAACGGGAAGACAATCATCCCCTATAAGAAGGGTGCCTGGTGTTC 736

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags of or identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantifathing a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and the protein expression or sesses biodiversity and the protein expression or sesses biodiversity and the protein expression or sesses biodiversity and the protein expression of mutations and the protein expression or biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1236 GGCTCACCTACAAGACCGCCAAGGACTCCTTCCGCTGGGCCACAGGGGAGCACCAGGGC 1295

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           δy
polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymerase chain reaction (PCR) primers, oligomers, and for chromosome polymedeptides are also used in diagnostics as expressed sequence tags polymediating expressed genes. (I) is useful in gene therapy techniques for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving anomalizating antibodies against it, detecting or quantitating a polymeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical imaging of sites expressing or binding partners are useful in medical imaginestics, forensics, gene mapping, identification of mutations of the produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human conditional put was obtained in electronic format directly from WIPO specification, but was obtained in electronic format directly from WIPO

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags confidentifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical magning of sites expressing (II). (I) and (II) are useful for treating isone supplement. (II) and its binding partners are useful in medical magning of sites expressing (II). (I) and (II) are useful for treating isone applications in the protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and amino acid sequences of the invention.

Some and to produce other types of the invention.

Some and to produce data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO tree is the printed or specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1104 CAGAGGAAAGGCGGGGTGCTGGCCCAGATCAAGAGCCAGAAAGTGCAGGACATCCTCGCC 1163
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 252 CAGAGGAAAGGCGGGGTGCTGGCCCAGATCAAGAGCCAGAAAGTGCAGGACATCCTCGCC 193

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     polypeptide (II) sequences. (I) is useful as hybridisation probes, and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The and gene mapping, and in recombinant production of (II). The conjudentifying expressed genes. (I) is useful in gene therapy techniques for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inmaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations and to produce other types of data and products dependent on DNA and and can man and an and products dependent on DNA and diagnostic coding sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1107 AGGAAAGGCGGGGTGCTGGCCCAGATCAAGAGCCAGAAAGTGCAGGACATCCTCGCCTTC 1166

The invention relates to isolated polynucleotide (I) and . polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in the printed and produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human and again of the sequences of the invention.

Specification but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           1360 GGTTTGGCAACTGCGTGGAGCTGCAGGCTTCAGCTGCATTCAACTGGAACGACCAGCGCT 1419

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               δŏ
                                                                                                                                                                                                                                                                                                                                                             The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chair reaction (FCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving. (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (II) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in capposition for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human and approach of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymeratase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags of orientifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving antibodies against it, detecting or (II). (II) is useful for generating antibodies against it, detecting or a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forgeneic, disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human cream of an expension of the invention.

Note: The sequence data for this patent did not appear in the printed sequences the fire invention of mutations are fitp. wipo. int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving or (II). (II) is useful for generating antibodies against it, detecting or a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in the printed disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. Abs6419'-AAS94564 represent novel human cand aguence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ..

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. A8564197-A8594564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          1260 GACTCCTTCCGCTGGGCCACAGGGGAGCACCAGGCCTTCACCAGTTTTGCCTTTGGGCAG 1319

The present invention describes nucleic acids encoding PRO secreted and transmembrane proteins used therapeutically. The PRO proteins have activities, anti-inflammatory, anti-proliferative and immunosuppressive activity. The proteins and polynucleotides can be used in therapy, and printers. They can be used in a range of diseases and design of probes that they have homology with, e.g. a PRO protein having homology to complement proteins may be used in inflammatory responses. The present sequence represents a probe used in an example from the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ROY MA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a probe used to screen for cDNA encoding a novel human polypeptide. The specification describes novel polypeptides designated PRO201, PRO2025, PRO217, PRO1025, PRO344, PRO344, PRO347, PRO357, PRO115, PRO1011, PRO1011, PROS03 and PRO882. These genes are amplified in the genome of tumour cells. The polypeptides are laplieved to contribute to tumourigenesis. The polypeptides are useful target for the jecunification of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies against these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth and proliferation in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO Anti-PRO antibodies are useful for the affinity purification of PRO (AAA44945, AAA44946) were used to isolate the cDNA sequence encoding human PRO347. A hybridisation probe for human PRO347 is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Haematopoiesis; clotting; kidney failure; wound healing; cancer; neoplasia; pancreatic disorder; pancreatitis; cerebrovascular disease;

The invention relates to nucleic acids encoding a variety of proteins human T139 (TANGO-139), T125 (TANGO-125), T110 (TANGO-110), murine T175 (TANGO-125), T110 (TANGO-110), murine T175 (TANGO-175), human T175 or murine WDMM-2, having diagnostic, preventive, therapeutic and other uses. Polypeptide of the invention has the ability to the invention has the ability to modulate cell-cell interactions, heamatopoiesis and the ability to modulate colotting. Polypeptide and other uses. Polypeptide clotting. Polypeptide and other accesses a cell-cell interaction or activity. The collynucleotide of the invention aberrant expression or activity. The antibodies are useful for treating and for treating and treating cancer, TANGO-139 is useful in wound healing and for treating cancer, TANGO-110 (TANGO-125) useful in wound healing and for treating cancer, TANGO-110 is useful for treating neoplasia. TANGO-177 or WDMM-2 is useful for treating neoplasia. TANGO-177 or WDMM-2 is useful for treating cancer, are useful to treat pancreatic disorders, such as ischaemic heart disease, cardiovascular disease, and tumours, and influxy or trauma to the brain. TANGO-125, 110, 175 molecules treat heart disorders, e.g., creating experientials). TANGO-125, 110 and 175 molecules are useful to treat chick disorders, such as inflammatory disorders. TANGO-175, or disease and tumours. And plower and experience of sorders, such as inflammatory disorders. TANGO-175, or disease and tumours. TANGO-139, 125, 110, and 175 molecules are useful for treating proliferative disorders, inflammatory disorders. TANGO-175, or wDNM-2 activity also include apoptotic disorders, rheumatoid arthritis, systemic lupus erythematosus, insulin-dependent diabetes mallitus, immune-related disorders, inflammatory disorders, viral immune-related disorders, e.g., immune-related disorders, e.g., immune-related disorders, e.g., inmunoedicitic acids of the invention disorders. The plant apoptotic disorders and apoptotic disorders. The nucleic acids of the invention
heart disorder; ischaemic heart disease; neuroprotective; vulnerary; cardiovascular disorder; ischaemic heart disease; immunosuppressive; glomerular disease; glomerulonephritis; uterine disorder; hyperplasia; fetal spleen; prostate disorder; inflammatory disease; Crohn's disease; proliferative disorder; gynaecological; hemostatic; antibacterial; systemic lupus erythematosus; immunodeficiency disorder; antiasthmatic; cytostatic; nephrotropic; antidiabelic; cerebroprotective; tranquilliser; hypotensive; tunnur; injury; trauma; antianginal; vasotropic; antiuloer; hepatotropic; antipsoriatic; antiallergic; dermatological; virucide; pCR; primer; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel TANGO polypeptides and nucleic acid molecules useful as modulating agents in regulating cellular processes and for diagnosing and treating heart, liver, lung, kidney, inflammatory and cellular proliferative disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Goodearl ADJ, Mccarthy SA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This is the nucleotide sequence of hybridisation probe 44176.tm.pl that can be used in the identification of DNA44176 (see AAX87260) nucleic acids coding for PRO347 (see AAX06483). This gene is amplified in various tumour lines. The invention identifies 14 human lung, colon and/or breast cancers and/or cell lines. This gene amplification is expected to be associated with overexpression of the gene product and to contribute to tumorigenesis. The encoded proteins (see AAX06477-90) may be useful targets for the diagnosis and/or treatment of of certain cancers, and may act as

PCR primers AAA46957-58 and probe AAA46959 were used to isolate cDNA encoding a novel human polypeptide. The specification describes novel polypeptides designated PR0201, PR0292, PR0327, PR01265, PR0344, PR0343, PR0347, PR0357, PR01017, PR01112, PR0569, PR0569, PR0344, PR0343, These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The POLYPEPTIGES are useful target for the identification of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies against these polypeptides are useful in the treatment diagnosis of neoplastic cell growth and proliferation in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New anti-polypeptide antibody useful in the treatment and diagnosis of

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      δλ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          qq
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               polypeptides which are designated as PRO polypeptides are described. The membrane-bound proteins have various industrial applications, including as pharmaceutical and diagnostic agents. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources. Two primers (AAA49532, AAA49534) were used for gene amplification analysis of the sequence encoding human PRO347. A hybridisation probe also used in the analysis is described (AAA49533).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New human nucleic acids encoding secreted and transmembrane polypeptides, designated as PRO polypeptides, useful as pharmaceutical and diagnostic agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; PRO protein; tumour necrosis factor family; INF; cytokine;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eaton DL, Ferrara N, Filvaroff E;

transmembrane proteins used therapeutically. The PRO proteins have cytostatic, anti-inflammatory, anti-proliferative and immunosuppressive activity. The proteins and polynucleotides can be used in therapy, identification of homologues, raising antibodies and design of probes and primers. They can be used in a range of diseases related to proteins that they have homology with, e.g. PRO protein having homology to complement proteins may be used in inflammatory responses. The present sequence represents a PCR primer used in an example from the present

                                                                                                                                                                                                                                                                                                                                                       The present invention describes nucleic acids encoding PRO secreted and transmembrane proteins used therapeutically. The PRO proteins have cytostatic, anti-inflammatory, anti-iproliferative and immunosuppressive activity. The proteins and polynucleotides can be used in therapy, identification of homologues, raising antibodies and design of probes and primers. They can be used in a range of diseases related to proteins that they have homology with, e.g. a PRO protein having homology to complement proteins may be used in inflammatory responses. The present sequence represents a PCR primer used in an example from the present

New anti-polypeptide antibody useful in the treatment and diagnosis of neoplastic cell growth and proliferation -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         against
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ROY MA;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          PCR primers AAA46919-20 were used to amplify cDNA encoding a novel human polypeptide. The specification describes novel polypeptides designated PRO201, PRO322, PRO347, PRO343, PRO343, PRO341, PRO341, PRO357, PRO10112, PRO595, PRO345, PRO345, PRO91017, PRO1112, PRO509, PRO653 and PRO882. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the identification of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodles agains these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth and proliferation in mammals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              PRO201; PRO292; PRO327; PRO1265; PRO344; PRO343; PRO347; PRO357; PRO715; PRO1017; PRO1112; PRO509; PRO853; PRO882; tumour cell; tumourigenesis; cancer; neoplastic cell growth; cell proliferation;

                                                                                                                                                                                                                                                                        PCR primers AAA46919-20 were used to amplify cDNA encoding a novel human polypeptide. The specification describes novel polypeptides designated PRO201, PRO322, PRO327, PRO344, PRO343, PRO343, PRO315, PRO115, PRO1101, PRO1112, PRO599, PRO853 and PRO882. These genes are amplified in the genome of tumour cells. The polypeptides are believed to contribute to tumourigenesis. The polypeptides are useful target for the identification of certain cancers, and may act as predictors of the prognosis of tumour treatment. Antibodies agains these polypeptides are useful in the treatment and diagnosis of neoplastic cell growth and proliferation in mammals.
                                                                                                                                                                      Roy

New human nucleic acids encoding secreted and transmembrane polypeptides, designated as PRO polypeptides, useful as pharmaceutical and diagnostic agents
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New human nucleic acids encoding secreted and transmembrane polypeptides which are designated as PRO polypeptides are described The membrane-bound proteins have various industrial applications, including as pharmaceutical and diagnostic agents. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO Anti-PRO antibodies are useful for the affinity purification of PRO (AAA49495, AAA49466) were used to isolate the cDNA sequence encoding human PRO347. A hybridisation probe for human PRO347 is also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

                                                                                                          polypeptides which are designated as PRO polypeptides are described the membrane-bound proteins have various industrial applications, including as pharmaceutical and diagnostic agents. The membrane-bound proteins can also be employed for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interaction. Anti-PRO antibodies are useful for the affinity purification of PRO from recombinant cell culture or natural sources. Two primers (AAA49495, AAA49496) were used to isolate the cDNA sequence encoding human PRO347. A hybridisation probe for human PRO347 is also
           New human nucleic acids encoding secreted and transmembrane polypeptides, designated as PRO polypeptides, useful as pharmaceutical

Also included are modulating (M2) GA by contacting GC with an agent that alters the expression of at least one gene in Gs; (2) screening (M3) for an agent capable of modulating GCA or an inflammation (especially chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the gene expression profile; (3) detecting (M4) an inflammation (especially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Detecting granulocyte activation by detecting differential expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     of genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and
a new mutant variant, designated CYP2A6v2, of cytochrome P450 isoenzyme CYP2A6, an allele associated with drug sensitivity and carcinogen metabolism. Alterations in sequence from the wild-type CYP2A6 gene occur within exons 3, 6 and 8, and are attributed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       viral infection; parasitic infection; protozoal infection; fungal infection; sterile inflammatory disease; psoriasis; rheumatorid arthritis; glomerulonephritis; asthma: thrombosis; cardiac reperfusion injury; renal reperfusion injury; ARDS; adult respiratory distress syndrome; inflammatory bowel disease; Crohn's disease; ulcerative colitis; periodontal disease; granulocyte activation; chronic inflammation; allergy.
                                                                                                                                            gene conversion. The nucleic acid sequences can be used to determine a patient's sensitivity to drugs or to chemical or environmental carcinogens, and can also be used in gene therapy, in gene polymorphism detection and in genotyping.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human cDNA differentially expressed in granulocytic cells #837.

cc chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression of the gene is indicative of inflammation; the level of expression of the gene is indicative of inflammation; c. (4) treating (MS) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having consterile inflammatory disease, by contacting a tissue having cinflammatory disease, by contacting a tissue having condulating ds. M3 is useful for detecting GN, MZ is useful for condulating ds. M3 is useful for screening an agent capable of modulating GN preferably in an inflammation in a tissue; M4 is useful for exportance in a subject, exposure of a subject to a pathogen or sterile inflammatory disease (e.g. psoriasis, rheumatoid arthritis, inflammatory disease (e.g. psoriasis, rheumatoid arthritis, gratic inflammatory bowel disease, crohn's disease, ulcerative colitis, periodontal disease; also bacterial infection, viral infection, or protozoal infection, viral infection, and M5 is expendit for treating one of the above conditions. The persent contractive colitis, rhe patent did not form part.

Conflammatory disease, crohn's disease, ulcerative colitis, esquence represents a gene differentially expressed in granulocytes. Conflammatory by the pathogen of the above conditions. The present

replace (6783,G)

variation

```
The invention relates to an isolated polynucleotide (I) comprising a nucleotide sequence which is a polymorphic variant of a reference sequence for Selectin L Lymphocyte Adhesion Molecule I (SELL) gene. SELL polypeptide is useful for screening for drugs targeting the polypeptide. Oligonucleotides derived from (I) are used to target SELL and a haplotype or haplotype pair of SELL gene. These are useful in developing diagnostic tests and therapeutic treatments for neonatal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel genetic variants of selectin L lymphocyte adhesion molecule 1 (SELL) gene useful for therapeutic purposes and for expressing SELL protein useful in identifying drugs to treat whooping cough .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /standard_name= "Single nucleotide polymorphism"
                                                                                                                                                                                                                                                                                                                                                                                                                                                                    /standard_name= "Single nucleotide polymorphism"

pertussis (whooping cough). (I) is useful for studying the expression and function of SELL and expressing SELL protein for use in screening for candidate drugs to treat diseases related to SELL activity. The polymorphism and haplotype data are useful for validather whether SELL is cut ugs and reducing bias in clinical trials of such drugs. Establishing in cut sell and reducing bias in clinical trials of such drugs. Establishing improving the efficiency and reliability of several steps in the cit siscovery and development of drugs for treating diseases associated with SELL activity e.g. neonatal pertussis (whooping cough). The haplotyping cough is useful to validate SELL as candidate target for treating a sectivity. The method is also useful in screening for compounds.

CC SELL activity as a specific condition or disease predicted to be associated with SELL to treat a specific condition or disease predicted to be associated with SELL to treat a specific condition or disease predicted to be associated with SELL to treat a specific condition or disease predicted to be associated with SELL activity. For an applotype pairs present in individual members of a ctivity for each of the most frequent SELL is useful in studying to compounds that display the highest desired agonist or antagonist condition. A polymorphic variant of SELL is useful in studying the effect of the variation on the biological activity of SELL, on the freatment of neonated pertussis (whooping cough) and in assays to measure the condition of more candidate drugs targeting the SELL condition the present sequence represents the SELL gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human; adenosine receptor; low adenosine antisense oligonucleotide; phosphorothioate; impaired respiration; inflammation; allergy; allergic disease; bronchoconstriction; inhibitor; antinflammatory; antiallergic; antiasthmatic; cytostatic; analgesic; impaired airway; lung disease; ischaemic condition; pulmonary vasoconstriction; asthma; respiratory distress syndrome; pain; cystic fibrosis; emphysema; pulmonary hypertension; chronic obstructive pulmonary disease; COPD; cancer; leukaemia; lymphoma; carcinoma; metastasis; ss.

New antisense oligonucleotides useful for treating e.g. pulmonary

(UYEC-) UNIV EAST CAROLINA.

WPI; 2000-205971/18.

Nyce JW;

```
The present invention describes a new composition comprising an antisense oligonucleotide (ON) with low adenosine (up to 158), which cargets nucleic acids involved in bronchoconstriction, allergies, and/or inflammation. The ON can have antiinflammatory, antiallergic, andiasthmatic, cytostatic and analgesic activities. The compositions are useful for the treatment of diseases associated with inflammation, impaired airways, including lung disease and diseases whose secondary of a subject. They can be used for treating effects afflict the lungs of a subject. They can be used for treating conflictions, pulmonary vasoconstriction, allergies, pulmonary hypertension, emphysema, chronic obstructive asthma, impeded respiration, respiratory distress syndrome, pain, cystic fibrosis, pulmonary hypertension, emphysema, chronic obstructive carcinomas, and cancers which may metastasise to the lungs, including the presset defects. The A-containing ONs break down with the crease of deoxyadenosine which activates adenosine content of crease of deoxyadenosine which activates adenosine content of the obstactic sequences given in the sequence listing from the present invention, which correspond to SEQ ID NO: 1 to 185, but the sequences of differ from the previously named sequences. SEQ ID NO: 1 to 185, but the sequences of invention No. B. Sequences given in the disclosure of the present invention Analy3233 to Analy3233 to Analy3233 to Analy3233 to Analy3233 to Analy323 to the previously named sequences. SEQ ID NO: 1 to 185, invention to not match up with their corresponding SEQ ID NO: sequences are also called sequences of the previously named sequences of the previously named sequences. SEQ ID NO: 1 to 185, and then the previously named sequences of the previous of the previous of invention do not match up with their corresponding SEQ ID NO: sequences are also called sequences of the previous sequences are also called sequences o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Low adenosine antisense oligonucleotide; phosphorothioate; allergy; human; airway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antinflammatory; immunosuppressive; antiasthmatic; analgesic; hypotensive; cytostatic; respiratory obstruction; pulmonary obstruction; impeded respiration; surfactant hypoproduction; pulmonary vasoconstriction; asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis; pulmonary hypertension; emphysema; pulmonary transplantation rejection; chronic obstructive pulmonary disease; pulmonary infection; bronchitis;

chemokine receptors, adenosine receptors, bradykinin receptors, central nervous system (CNS) and peripheral nervous and non-nervous system receptors. CNS and peripheral nervous and non-nervous system receptors, CNS and peripheral nervous and non-nervous system receptors, CNS and peripheral nervous and non-nervous system receptors, defensins, growth factors, vascactive peptides and receptors, binding proteins and malignancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders including respiratory obstruction (specially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergy(ies) and/or surfactant hypoproduction which are associated with a disease or condition selected from pulmonary vasconstriction, inflammation, condition selected from pulmonary vasconstriction, inflammation, hypertension, emphysema, chronic obstructive pulmonary distress syndrome (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary phyprotections, pulmonary infections, bronchitis, and/or cancer. AARI8434 to AARI8433 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Low adenosine antisense oligonucleotide; phosphorothicate; allergy; human; airway disorder; bronchoconstriction; lung inflammation; surfactant depletion; respiratory; bronchodilator; antihilammatory; immunosuppressive; antiasthmatic; analgesic; hypotensive; cytostatic; respiratory obstruction; pulmonary obstruction; impeded respiration; surfactant hypoproduction; pulmonary vasoconstriction; asthma; RDS; respiratory distress syndrome; pain; cystic fibrosis; allergic rhinitis;
                                                                                                                                                                                                                                                                                                                                                                                oligonucleotides and compositions (1) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (1) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiathmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (1) can be used to down-regulate the expression and or activity of target polypeptides associated with lung/respiratory disorders and malignancies, such as stimulating and activating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adhesion molecules and their receptors, cytokine and binding proteins, adhesion molecules and their receptors, cytokine and
                                                                                                                                                                                                Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human low adenosine antisense oligonucleotide related sequence #2694.
                                                                                                                                                                                                                                                                                                                                                                present invention describes low adenosine (A) content antisense
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 141589 BP; 42856 A; 28938 C; 26863 G; 42932 T; 0 other;

The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodiator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the expression and or activity of target polypeptides associated with capturing peptide factors and malignancies, such as stimulating and certivating peptide factors and transmitters, transcription factors, immunoglobulins and antibodies, antibody receptors, cytokines and chemokines endogenously produced specific and non-specific enzymes, binding proteins, adenosine receptors, bradykinin receptors, central nervous and non-nervous system creeptors, defensins, and peripheral nervous and non-nervous system creeptors, defensins, arowth factors, vasoactive peptides and respiratory obstruction (especially pulmonary obstruction and/or bronchoconstriction) and/or lung inflammation, allergies, asthma, impeded respiratory millering respiratory obstruction which are associated with a disease or condition selected from pulmonary vasoconstriction, inflammation, allergies, asthma, impeded respiratory pulminary respiratory of the spiratory respiratory is allergies, asthma, impeded respiratory respiratory is allergies, asthma, impeded respiratory respiratory is allergies, asthma, impeded respiratory constriction, inflammation, allergies, asthma, impeded respiratory constriction will allergies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (RDS), pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary hypertension, emphysema, chronic obstructive pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary infections, bronchitis, and/or cancer. AAF18434 to AAF21543 represent human polynucleotide fragments and antisense oligonucleotides used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                 Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -
chronic obstructive pulmonary disease; pulmonary infection; bronchitis;

Low adenosine (A) content antisense oligonucleotides which do not trigger adenosine receptors during metabolism, useful e.g. for treating cancers and respiratory obstructions -

Disclosure; Page 1049-1081; 1592pp; English.

the animonal controlled and the controlled with a cartivating obtains and or activity of target polypeptides associated with a cartivating peptide factors and maignancies, such as stimulating and cartivating peptide factors and maignancies, such as stimulating and cartivating peptide factors and maignancies, transcription factors, chemokines, endogenously produced specific and non-specific enzymes, binding proteins, adenosine receptors, bradkinin receptors, cytokine and nervous system (CNS) and peripheral nervous and non-nervous system creeptors, defensins, growth factors, vascative peptides and ransmitters, defensins, growth factors, vascative peptides and creeptors, binding proteins and mallingancy associated proteins. The creeptors, binding proteins and mallingancy associated proteins. The antisense oligonucleotides may be used in this way to treat disorders and/or bronchoconstriction (especially pulmonary obstruction (especially pulmonary obstruction cand/or surfactant hypoproduction which are associated with a disease or and/or surfactant hypoproduction which are associated with a disease or condition selected fine pulmonary vascoonstriction, inflammation, allergy (es) pain, cystic fibrosis (CF), allergic rhinitis (AR), pulmonary condition, emphysema, chronic obstructive pulmonary disease (COPD), pulmonary transplantation rejection, pulmonary infections, bronchitis, creamons, invention condition antisense oligonucleotides used in the exemplification of the present invention. The present invention describes low adenosine (A) content antisense oligonucleotides and compositions (I) comprising them. In the antisense oligonucleotides the A is replaced by a 'Universal' or alternative base. (I) can have respiratory, bronchodilator, antiinflammatory, analgesic, immunosuppressive, antiasthmatic, hypotensive and cytostatic activities. The antisense oligonucleotides and (I) can be used to down-regulate the the present invention.

US-09-404-879A-321

US-09-404-879A-321

Sequence 321, Application US/09404879A

Patent No. 6468546

GENERAL INFORMATION:
APPLICANT: Mitcham, Jennifer L.
APPLICANT: Midcham, Jennifer L.
APPLICANT: Algate, Paul A.
TITLE OF INVENTION: COMPOSITIONS AND METHODS FOR THE THERAPY AND TITLE OF INVENTION: DIAGNOSIS OF OVARIAN CANCER.
FILE REFERENCE: 210121.462C2
CURRENT FILING DATE: 1999-09-24

NUMBER OF SEQ ID NOS: 393

SOFTWARE: FastSEQ for Windows Version 3.0

LENGTH: 690
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 14
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   664 CCTACTCCCCCGGAGGCAACTGGGAGGTCAACGGGAAGACAATCATCCCCTATAAGAAGG

Patent No. 5786210

GENERAL INFORMATION:

APPLICANT: Kenner, Gregory S.

APPLICANT: Kennedy, Jacqueline L.

APPLICANT: Zlotnik, Albert

TITLE OF INVENTION: MAMMALIAN THYMOKINE GENES

NUMBER OF SEQUENCES: 4

CORRESPONDENCE ADDRESS:

ADDRESSEE: DNX Research Institute

STREET: 901 California Avenue
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PRICR APPLICATION 047A.

                                                                                                                  Gaps
                                                                                                                                                                                                                                                                                          Sequence 34, Application US/09724864

Patent No. 6380362

GENERAL INFORMATION:
APPLICANT: Watson, James D

APPLICANT: Watson, James G.
TITLE OF INVENTION: Polynuclectides, polypeptides expressed

TITLE OF INVENTION: Py the polynuclectides and methods for their use.
FILE REFERENCE: 11000,1050u1

CURRENT APPLICATION NUMBER: US/09/724,864

CURRENT APPLICATION NUMBER: US. No. 6380362 60/171,678

PRIOR FILING DATE: 1999-12-23

NUMBER OF SEQ ID NOS: 72

SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                  .
